

Standard Containers

Scan this QR Code to read more information online.

## 20 or 40 Foot Long

Standard containers are commonly available as 20 foot (3m) or 40 foot (6m). Generally, 2 x 20 foot containers would take preference over 1 x 40' unless the items to be stored inside required the more than 3 meters in length.

## GP, HC or PWHC

Standard containers are available in general purpose, high cube and pallet wide formats. The high cube allows for an extra 30 centimeters in height and a pallet wide can fit two pallets side by side.

## Steel or Timber Floors

For heavy duty use, steel floors allow for an extra load bearing weight and longer container life. Timber floors are the cheaper alternative and have been chemically treated to deter insects.

## Side or End Doors

Depending on your access requirements, new standard containers are available with bi-fold opening doors one or each side and cargo doors on one or both ends.

## Container Shelving

Shipping containers can be equipped with heavy duty tiered shelving, equipment racks, gear trays and workbenches to create a portable storage space, equipment store or workshop.

## Custom Modifications

New shipping containers can be modified to meet the needs of any custom project with the addition of doors, windows, vinyl flooring, air conditioning, lighting, electrical fit, personnel doors and more.

## Dimensions Available

Standard size shipping containers are the most commonly used containers in the shipping and freight industry.

Be sure to consider lashing rings, corner posts and end or side doors for exact dimensions.

Our fabrication team can increase the length, width and height of containers to suit custom specifications. Containers can also be adjoined to create larger space solutions.
